BANDWIDTH **The Buzz Word of the Decade**

OLDSMAR, FL (February 1, 2000) – S&S Electric Co., Inc. the Gulf Coast leader in residential electrical systems, now installs the products necessary to meet the bandwidth requirements of today's sophisticated homebuyer. The Information Superhighway is no dream of the future it is in place now. We have telephones, cable and satellite TVs, home offices, fax, modems, multiple PC's, and the Internet at our service. That's why homes today need an improved wiring method to handle all of the new electronic equipment and services, now and into the future.

To meet the growing residential need for high bandwidth, S&S Electric Co., Inc. has teamed with **Square D**, and **Leviton** to offer our customers a choice of structured cabling systems able to meet today and tomorrow's communication requirements. Each system has its own unique features and price points, but both are able to meet the requirements for the growing demand of structured cabling systems.

Regardless of which system you use, the foundation is the same, **High Performance Cables**. Just because all these services can reach your house does not mean that you can access them. Certain services like digital satellite, high-speed Internet, digital phone, and digital TV require high performance cables. The basis of all of our structured cabling systems is the wiring, which include RG6-Quad Shield Coax for TV, Video, Satellite, and Internet; and Category 5e cable for telephone and data. These cables deliver all the performance you need today, while providing the capacity to handle tomorrow's technology. So regardless of which system below you chose the important thing is to get the wires behind the walls!

The heart of the Structured Cabling System is the System Enclosure., which provides the electronic foundation necessary to ensure that your family can be connected to today's services and prepared for tomorrows technologies. The system provides the critical wiring infrastructure for whole house distribution and control of multiple telephone lines, high-speed data, cable and satellite TV, all in a flexible, modular installation, which can accommodate future changes and additions. We use a combination of system enclosures and modules from **Square D Multi-Link** and **Leviton Integrated Networks**, providing personalized system solutions to meet our customer's needs.

Whichever system you choose, the important thing to remember is to get the right wires behind the wall. For additional information regarding any of our Structured Cabling System products visit our website @ www.ss-electric.com.

Installing confidence since 1947, S&S Electric Co., Inc. is West Central Florida's premier home systems contractor for many of the nation's top homebuilders. With more than 250 employees and offices in Oldsmar, Tampa, Sarasota and Naples, the company installs over 3,500 systems in homes annually. S&S Electric's extensive service offering includes Electrical, Air Conditioning, and Structured Cabling Systems, as well as the expertise of an award-winning team of designers, installers and technicians recognized throughout the industry for providing customers with value-added, reliable, quality system installations.
