Why Would You Let An Electrician Install Audio, Video, Voice, and Data Systems?

TAMPA, FL (July 15, 2001) – As the demand for residential Structured Cabling and residential Audio continues to skyrocket, so does the demand to qualified installers. And chances are there is already a trained and qualified installer on your job site, your Electrical Contractor.

For years there has been a stigma associated with the electrical contractor and their inability to install and work with low-voltage products. It is believed that electricians do not possess the care or skills to work within the delicate restraints of low-voltage cable. It was the Alarm and Audio-Video industry that started the propaganda against the Electrical Contractors. They intended to use Phone and TV cabling as a price-loss-leader to get their foot in the door and sell higher margin equipment and service contracts.

However, this stigma exists primarily in the residential field. In Commercial construction the majority of voice and data systems are installed by the Electrical Contractor, granted some contractors specialize in voice and data, but they are still licensed Electrical Contractors. And although some Electrical Contractors chose not to install these systems, does not mean that the industry is not qualified to do so.

As a State Certified Electrical Contractor (EC0002779), S&S Electric Co., Inc is licensed and qualified to install any level of electrical system including High-Voltage, Low-Voltage, Communications, and Alarm Systems. And all the work we perform is supervised, and inspected by a Licensed Journeyman or Master Electrician.

To further our expertise, training, and knowledge in this fast changing market the Team at S&S Electric Co., Inc. attends regular training and certification classes from the manufacture and trade associations. We are members of the Home Automation and Networking Association, the Custom Electronics Design and Installers Association (CEDIA), BICSI (Telecommunications Industry Association), International Association of electrical Inspectors (IAEI), and many other trade organizations for which we attend regularly. We also cross-train and learn for the vast experience of our own employees who come from a wide range of backgrounds, including: former Military Data and Communication specialists; former Telecommunication industry employees; and former Audio-Video company installers.

The advantage of an Electrical Contractor is convergence, one contractor that can meet all of your electrical needs (including High-Voltage, Audio, Video, Voice, and Data). One call gets the job done, one invoice gets it paid, and no pointing fingers on warranty.

Installing confidence since 1947, S&S Electric Co., Inc. is West Central Florida's premier home systems contractor for many of the nation's top homebuilders. With more than 250 employees and offices in Oldsmar, Tampa, Sarasota and Naples, the company installs over 3,500 systems in homes annually. S&S Electric's extensive service offering includes Electrical, Air Conditioning, and Structured Cabling Systems, as well as the expertise of an award-winning team of designers, installers and technicians recognized throughout the industry for providing customers with value-added, reliable, quality system installations.
